Summary statistics of American Samoa longline catch and effort for the third quarter of 2008, based on date of haul, are shown in Table 1. The table is derived from all logbook data submitted as of December 11, 2008. As of this date, the documented delinquency rate according to the Department of Marine and Wildlife Resources (DMWR) Daily Effort Census and Delinquency Reporting System for the third quarter of 2008 was 2.11%.

According to the longline logbook data, 24 vessels turned in longline logs for sets made during the third quarter of 2008 (Fig. 1). These 24 vessels made 1,160 sets (Fig. 2) and deployed 3,490,479 hooks (Fig. 3). The third quarter of 2008 showed declines in effort, with larger declines in catch for most species over the third quarter of last year. Compared to the third quarter of 2007, the number of vessels turning in logs this quarter decreased by 11%, from 27 vessels to 24, the number of sets decreased by 27%, and the number of hooks set also decreased by 27%. The average number of hooks used per set increased by less than 1%, from 2989 to 3008, reflecting a completed trend toward a fishing fleet of larger vessels deploying more hooks per set.

The total catch for all species combined was 80,884 fish (Fig. 4), which is a decrease of 45% compared to the near-record third quarter of last year. Albacore continued to dominate the catch, with 55,801 fish caught in the third quarter of 2008 (Fig. 5), a 51% decrease over the record 113,831 albacore caught in the third quarter of 2007. The catch of most species showed similar declines compared to the 3rd quarter of 2007. The bigeye tuna catch (Fig. 6) showed a decrease of 25%, yellowfin tuna catch (Fig. 8) showed a decrease of 61%, the catch of billfish (Fig. 11) was down 29%, the catch of sharks (Fig.12) was down 27%, and the wahoo catch (Fig. 10) dropped by 53%. The catch of skipjack tuna (Fig. 7) increased by 7.5% from its value in the third quarter of 2007 while the mahimahi catch (Fig. 9) showed an increase of 54% from its value a year ago.

Statistics on catch per 1000 hooks decreased less than the corresponding catch. The catch per 1000 hooks of albacore (Fig. 13) decreased by 33%, the catch per 1000 hooks of yellowfin tuna (Fig. 16) showed a decrease of 47%, the catch per 1000 hooks of wahoo (Fig. 18) dropped by 36%, and the catch per 1000 hooks of billfish (Fig. 19) was down 3% from its value a year ago. The catch per 1000 hooks of skipjack tuna (Fig. 15) increased by 46% from its value in the third quarter of 2007, the catch per 1000 hooks of mahimahi (Fig. 17) increased by 107%, the catch per 1000 hooks of bigeye tuna (Fig. 14) showed a slight increase of 2%, and the catch per 1000 hooks of sharks (Fig. 20) was unchanged.
Table 1. Summary of fish catch and nominal fishing effort by American Samoa Longline vessels during the third quarter of 2008 based on longline logbooks submitted before Dec. 11, 2008

TRIP INFORMATION
- Number of Vessels: 24
- Number of Trips: 88
- Number of Sets: 1,160
- 1000's of Hooks Set: 3,490
- Number of Light Sticks Used: 85
